

## **Always looking for colleagues to ride the digital wave**

You're interested in standing on the front line of digital evolution and want to be part of the newest improvements in the technological world?

Great!

You want to be part of the integration of digital designs in finished products?

Perfect!

You have a Master of Science degree in Engineering Technology or similar?

Terrific! Read on!

## **We make the world a smarter place**

Easics is the reference in smart electronic systems design. Our customers are world-leaders in their field. They give us interesting and rewarding challenges for first-of-a-kind applications. Take for example: neural net inference at the extreme edge, a radiation-hardened camera for earth observation satellites, top-notch hearing implants helping newborns and grandmas alike, power-harvesting wireless tags, ...

We discuss the complex algorithms and requirements with our customers and turn them into cutting-edge reality, solving the challenges inherent to silicon implementations. We model these challenges in software and optimize all layers of abstraction. Trade-offs in performance, power consumption and area are made along the way, resulting in the physical realization: an FPGA, a System-on-Chip or a custom-tailored ASIC at the heart of our customer's products.

## **We can't wait to see you join our growing team**

### **Field Application Engineer Full time**

We are currently seeking a highly motivated individual as a Field Application Engineer. You'll be working with our clients supporting them when they want to integrate our IP in their systems. As their first point of contact you'll also represent easics when additional features, enhancements or clarifications are requested.

In between these, you'll develop and enhance software tooling that enables easics designers and our customers to efficiently use and adapt our designs.

## Field Application Engineer

**(easics IP on FPGA, ASIC and embedded software)**

Whether this is your first application, or you've already had a first job experience, we'll give you extensive training, and a growing responsibility for a wide variety of projects.

We expect that:

- you're a team player.
- you're an excellent communicator, both towards customers and internally at easics.
- you're eager to learn.
- you have a keen interest in digital embedded systems and software methodology.
- you have a Master of Science degree in Engineering Technology, or similar.
- you're fluent in English and Dutch

It's a plus if:

- you already came into contact with digital design technologies/languages (VHDL, SystemVerilog etc.)
- you're fluent in other languages.

You'll soon come into contact with:

- our clients
- FPGA and digital ASIC integration and verification
- (embedded) software design and integration
- C, C++, VHDL, (System)Verilog, GNU/Linux, synthesis toolflows and easics in-house tools

You will work at the easics offices located in Leuven - Belgium. Structured work from home is possible up to 2 days per week.

easics is an equal opportunity employer. We value and recognize your talent with an attractive remuneration package.
